

Business Problem Statement

An e-commerce company operating on an Amazon-like retail platform wants to better understand customer purchasing behavior, product performance, and sales trends to improve revenue and customer satisfaction. The company has observed variations in sales across product categories, regions, payment methods, and order statuses.

You are tasked with analyzing the Amazon sales dataset to answer the following overarching business question:

“How can the company leverage Amazon sales data to identify purchasing trends, improve customer retention, optimize product performance, and maximize overall revenue?”

Deliverables

1. **Data Preparation & Modelling (Python):** Clean and transform the raw dataset for analysis.
2. **Data Analysis (SQL):** Organize the data into a structured format, simulate business transactions, and run queries to extract insights on customer segments, loyalty, and purchase drivers.
3. **Visualization & Insights (Power BI):** Build an interactive dashboard that highlights key patterns and trends, enabling stakeholders to make data-driven decisions.
4. **Report and Presentation:** Write a clear project report summarizing your key findings and business recommendations. Prepare a presentation that visually communicates insights and actionable recommendations to stakeholders.
5. **GitHub Repository:** Include all Python scripts, SQL queries, and dashboard files in a well-structured repository.
